Description

Stove with openable door and ash box.

Combustion air is supplied from outside or from a nearby room. This way, the air in the stove always stays fresh.

Specificities:

- The stove is made of cast iron, has a double rear wall;
- The stove is equipped with a double combustion system, when additional air is supplied to the upper part of the combustion chamber for combustion. The oxygen entering the combustion chamber ignites unburned gas - this system significantly increases the heat capacity of the fireplace core, reduces the release of unwanted carbon compounds into nature;
- suitable firewood with the length of up to 30 cm.

The stove body has a 10-year warranty.
