

Steel stove Axis STUFA 1000

Product code: Z4AXI-PO1000SF

Category: Wood burning stoves > Steel stoves

PRICE : €3,144.99

About the product

Description

Seguin Stufa 1000 steel stove with an openable door. It can be installed on the extra ordered firewood stand or hung on the wall (special holders should be ordered for such mounting).

You can heat with firewood up to 60 cm long.

The sides of the fireplace are lined with light fireclay bricks, which protect it from direct fire.

The stove is equipped with a double combustion system, when additional air is supplied to the upper part of the combustion chamber for combustion. The oxygen entering the combustion chamber ignites unburned gas - this system significantly increases the heat capacity of the fireplace core, reduces the release of unwanted carbon compounds into nature.

The nominal power is 12 kW.

The chimney exits upwards.

In addition, it is possible to order dark coloured fireclay bricks.
