Description

The stove made from cast iron with front or side loading.

Specificities:

• the combustion chamber is covered with vermiculite bricks;

• The stove is equipped with a double combustion system, when additional air is supplied to the upper part of the combustion chamber for combustion. The oxygen entering the combustion chamber ignites unburned gas - this system significantly increases the heat capacity of the fireplace core, reduces the release of unwanted carbon compounds into nature;

• suitable firewood with the length of up to 45 cm;

- the fireplace is connected from above or from the end;
- heated surface up to 320 m³;
- possibility to connect air supply from outside.

The stove body has a 10-year warranty.
